최적의 설계

뽕송이의 핵심부품인 냉각드럼은 영하 35도
순간 냉각이 지속적으로 유지되어 최상의 눈
꽃빙질을 만들어 냅니다.
빙질이 좋을 수록 더 뽕송뽕송하고 쉽게 녹지
않은 상태로 오래 유지됩니다.

Beautiful and soft snow ice production

At the moment to turn it on, cooled to -35 degrees Celsius, drum makes beautiful and soft ice flakes.

Equipped with controller, you can produce various typed ice flakes with a variety of materials.

Easy and hygienic management

In case of using milk, remaining residue is easily decayed. As a open structure, our product is much quicker and more hygienic cleaning in comparison to other products.

Super-low temperature flash cooling system with -35 degrees Celsius.

Even in the standby mode, at the moment of switch's on, temperature is falling to -35 degrees Celsius in a moment and ice flakes are produced in 10 seconds. So it's possible to respond against the order immediately without making it in advance.

Equipped with electronic control and sensor, auto-stop function when stop the raw material feeding, auto-break function for product protection, manufacturing function by distinguishing water or milk are controlled on its own.

FEATURES

Since milk is decayed easily, if not properly cleaned, it can cause big problems. Completely open-structured our product is possible that it's cleaned fast in every corner.

Our product is treated with a thick exterior of 50 mm in comparison to other products that are treated with simple steel exterior and also it functions both heating and cooling along with durability in side by filling foaming resin that is used into the refrigerator.

Various Recipe

Configured with simple menu, touch panel is various recipes by mixing milk and water or using blended basis and natural materials such as various fruits.

Being equipped with water filters protects products and allows to provide clean ice. 3 step-water filter prevents scale filling with cooling body of the product and produces clean ice when the water is frozen and creating snow ice.
